

How to Replace the 2-BUS-LT Face Plate

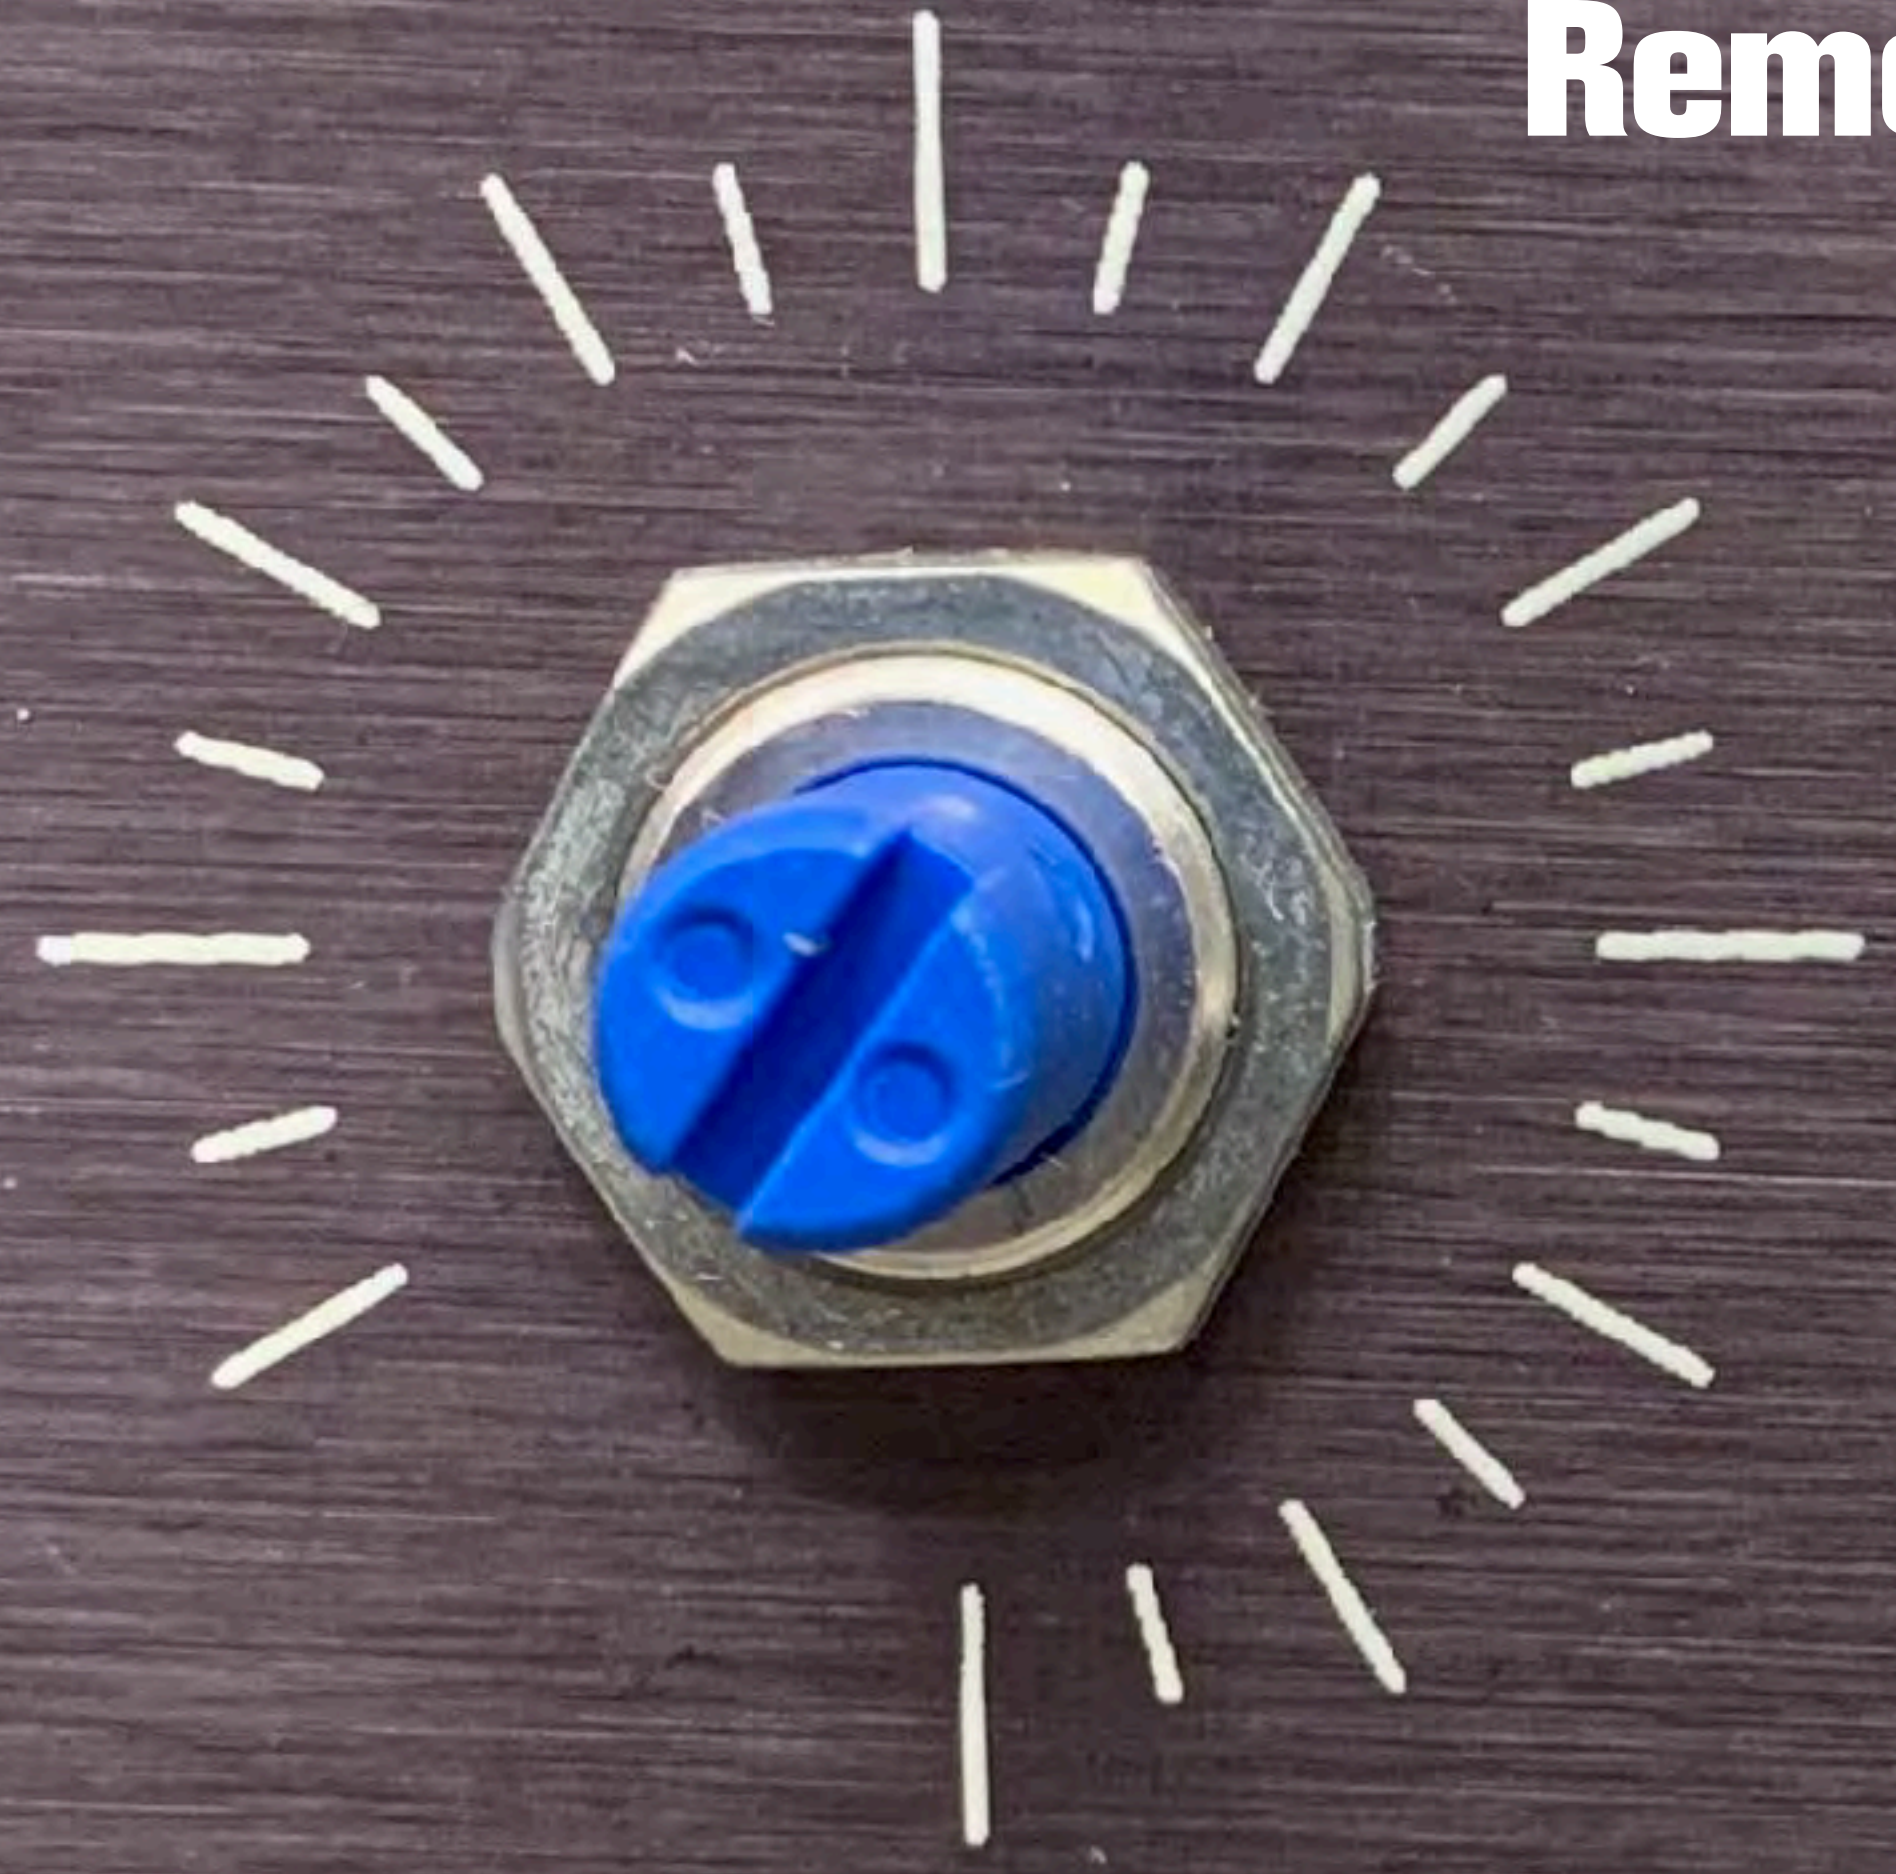

A black rectangular lid is shown against a light-colored background. Eight screws are visible, two on each of the four corners, and they are highlighted with orange circles. The lid is mounted on a metal base. The text "Remove the 8 screws from the lid" is centered on the lid in white.

Remove the 8 screws from the lid

Remove the 1/16th allen screw from the knob

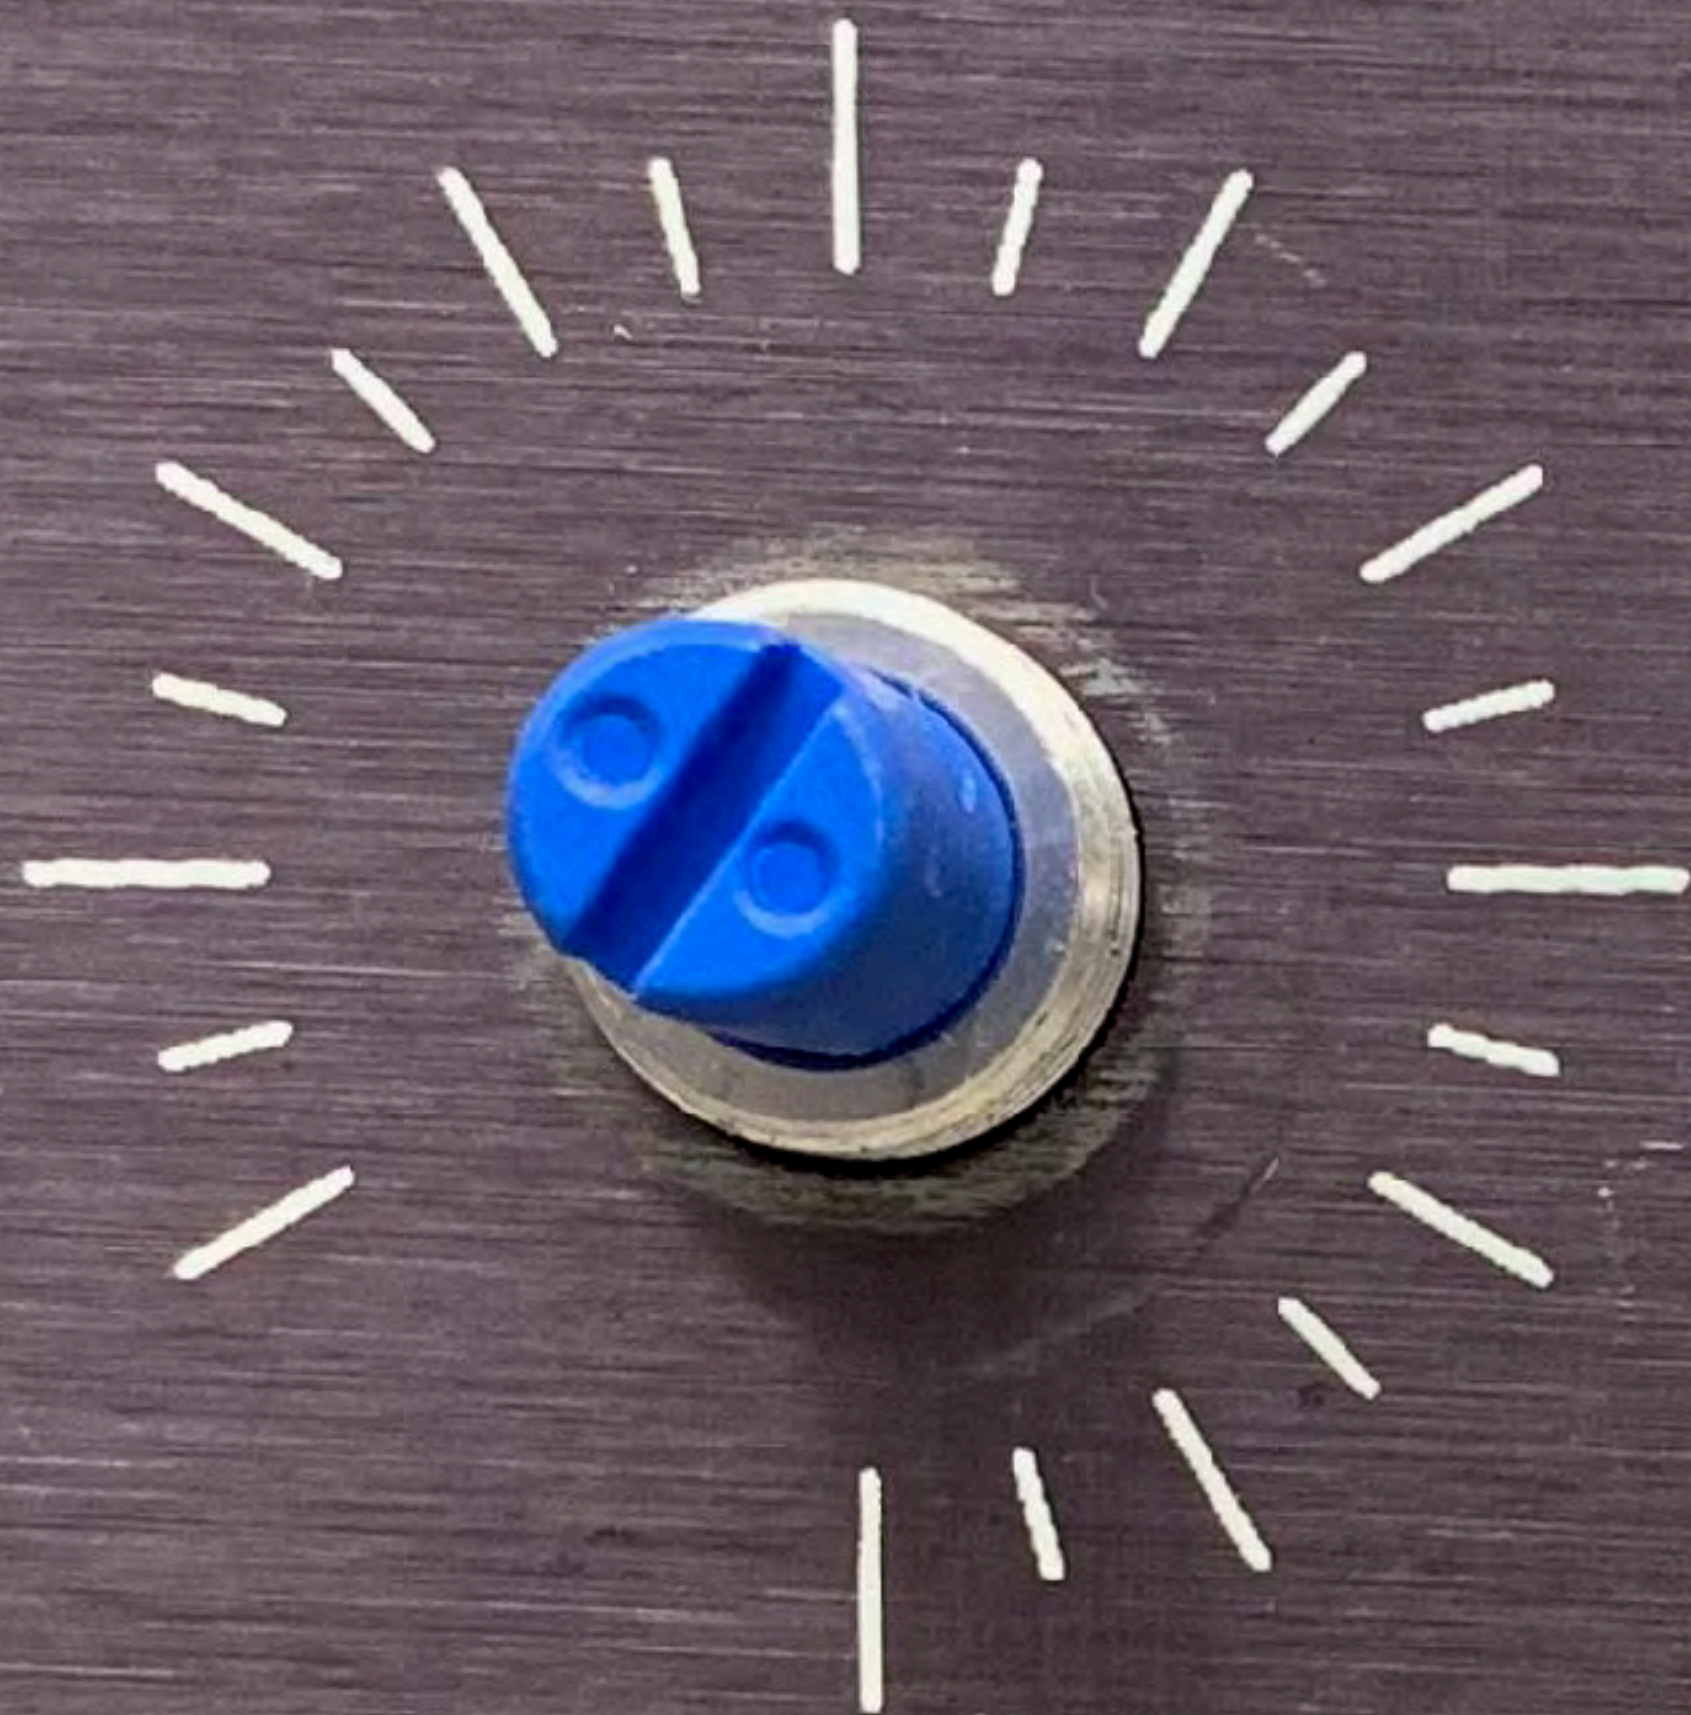

Remove original the knob

Unscrew the nut

**Remove the nut
(nut wrench or needle nose pliers)**

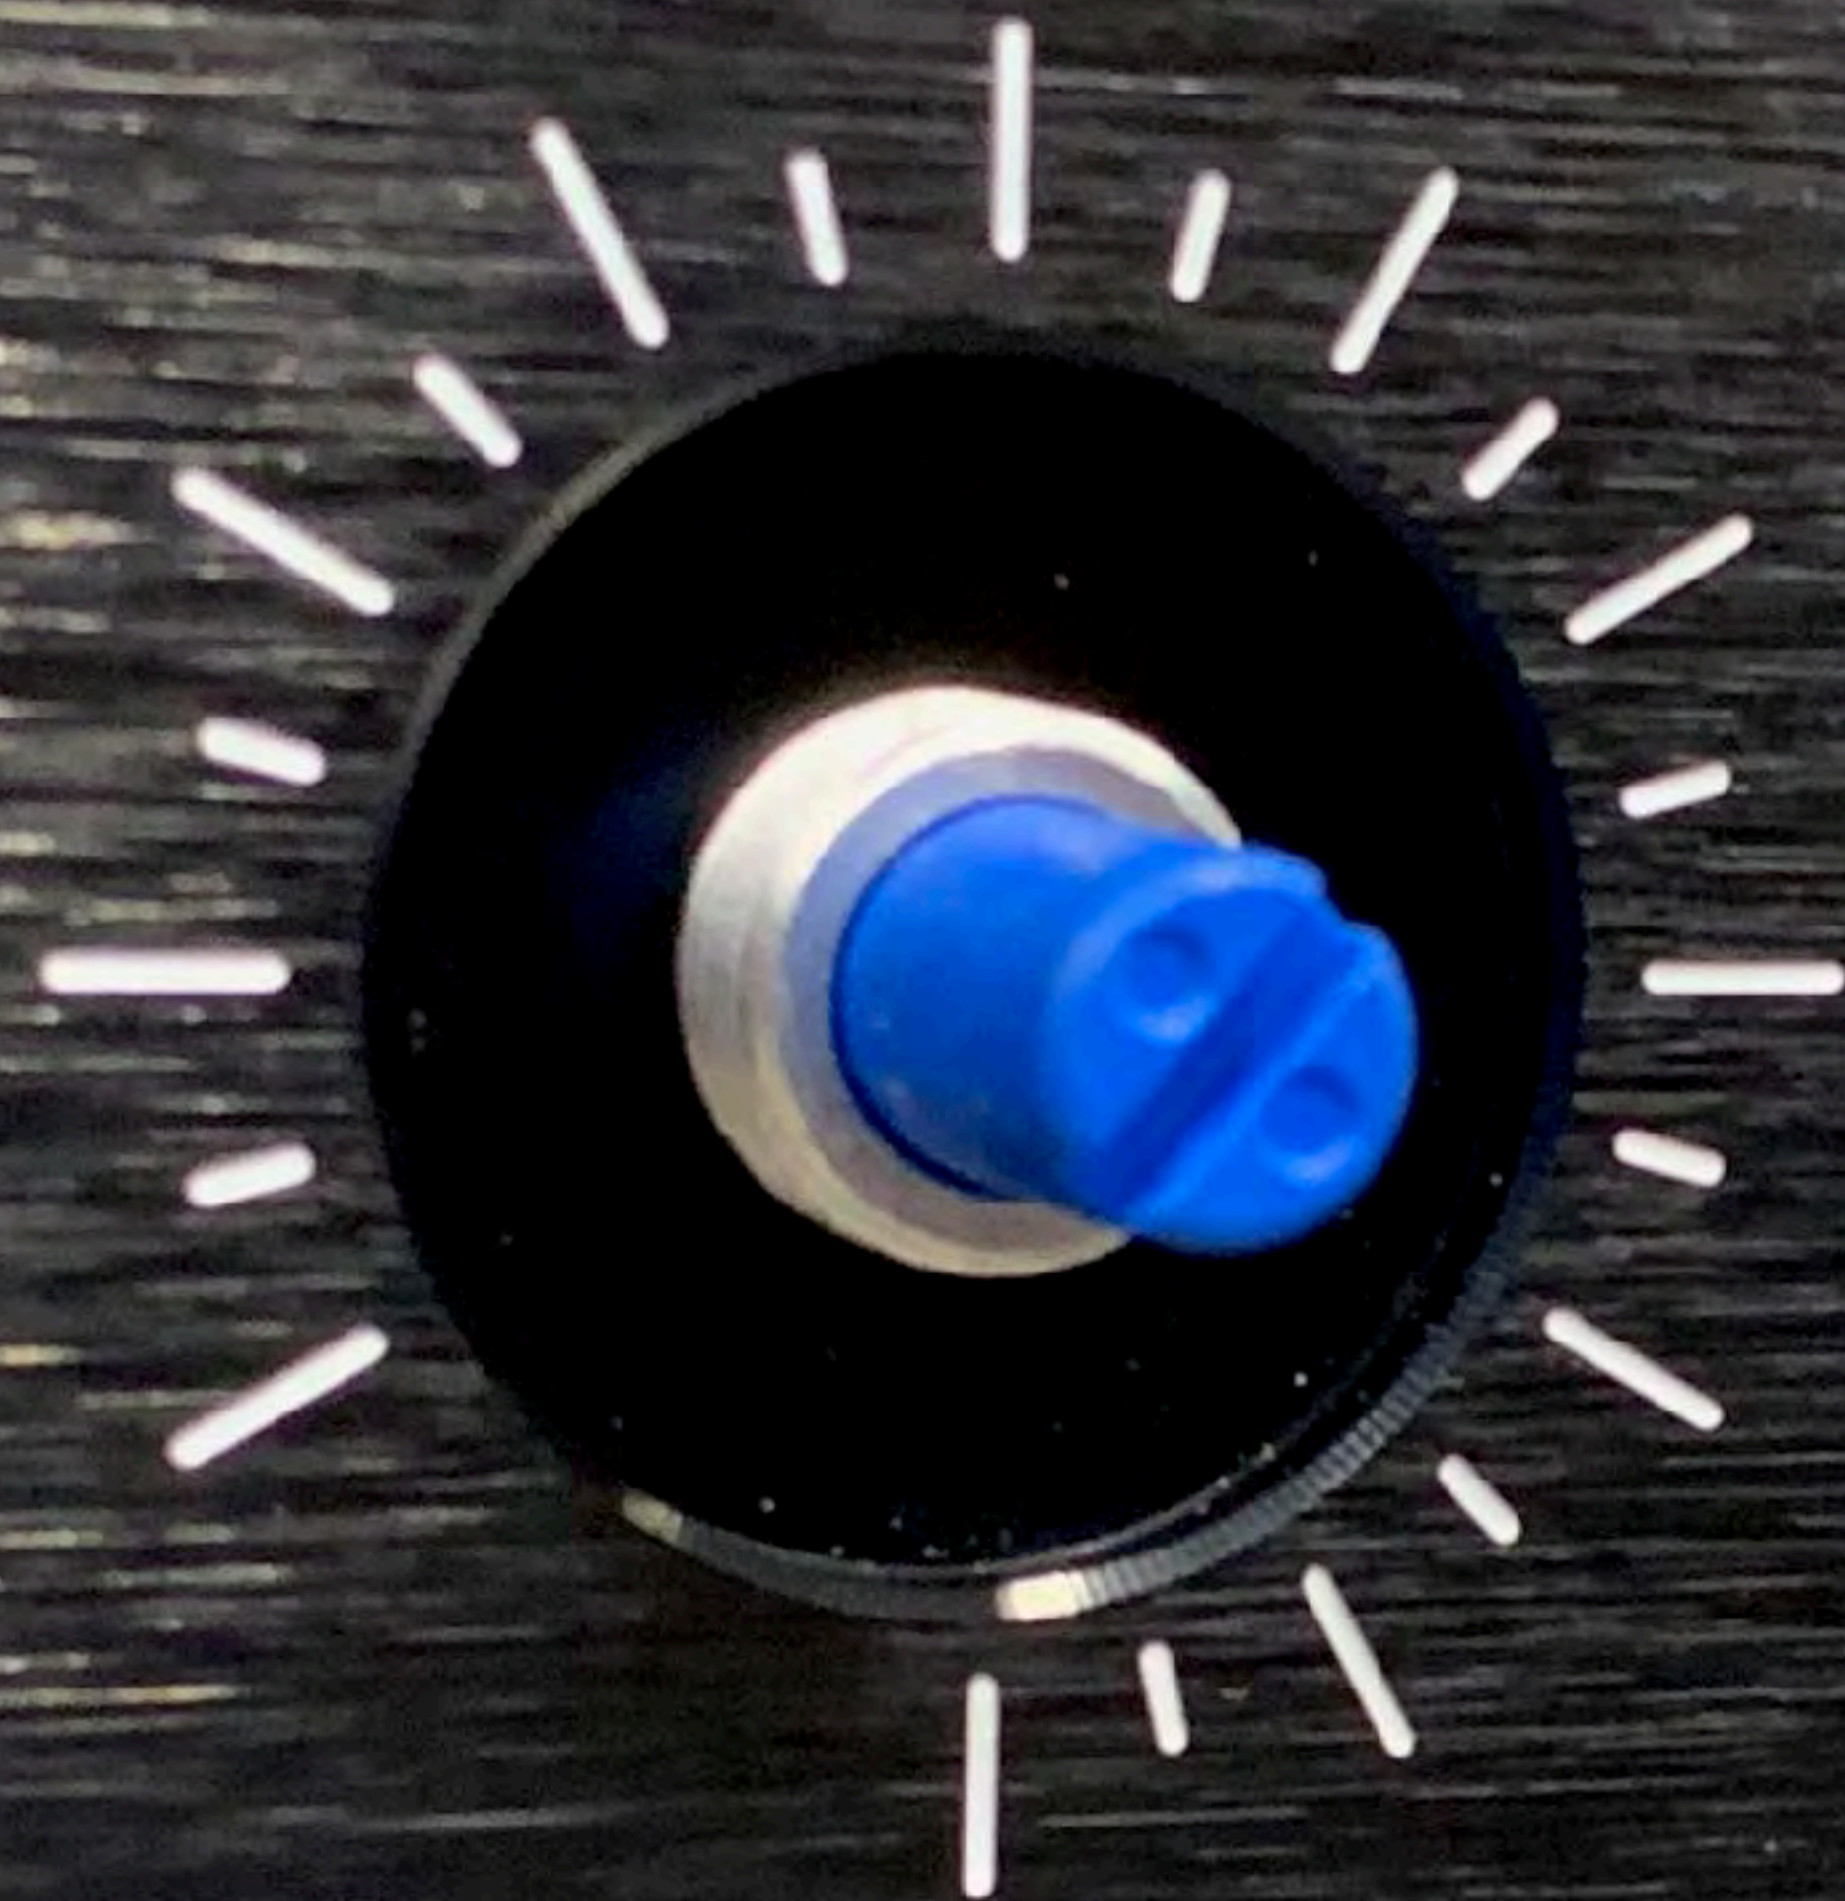

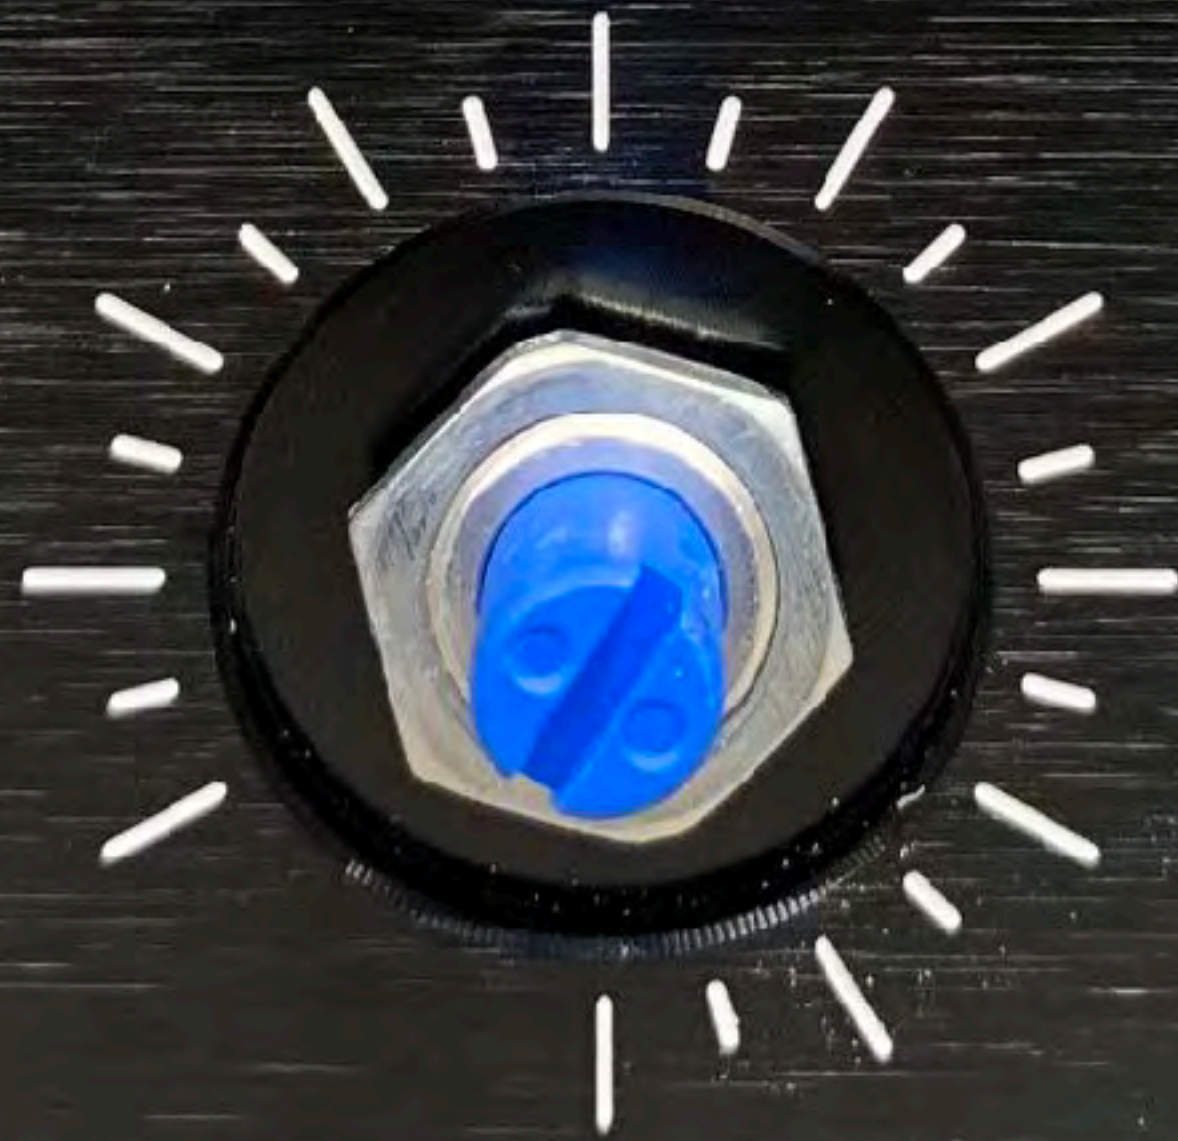

Remove the 4 screws from the front panel

The panel should now come off freely

Screw on the new front panel

**Holding the rear of the pot in place with your fingers,
replace the nut**

Turn the pot all the way down (counterclockwise)

Place the new knob on and line it up

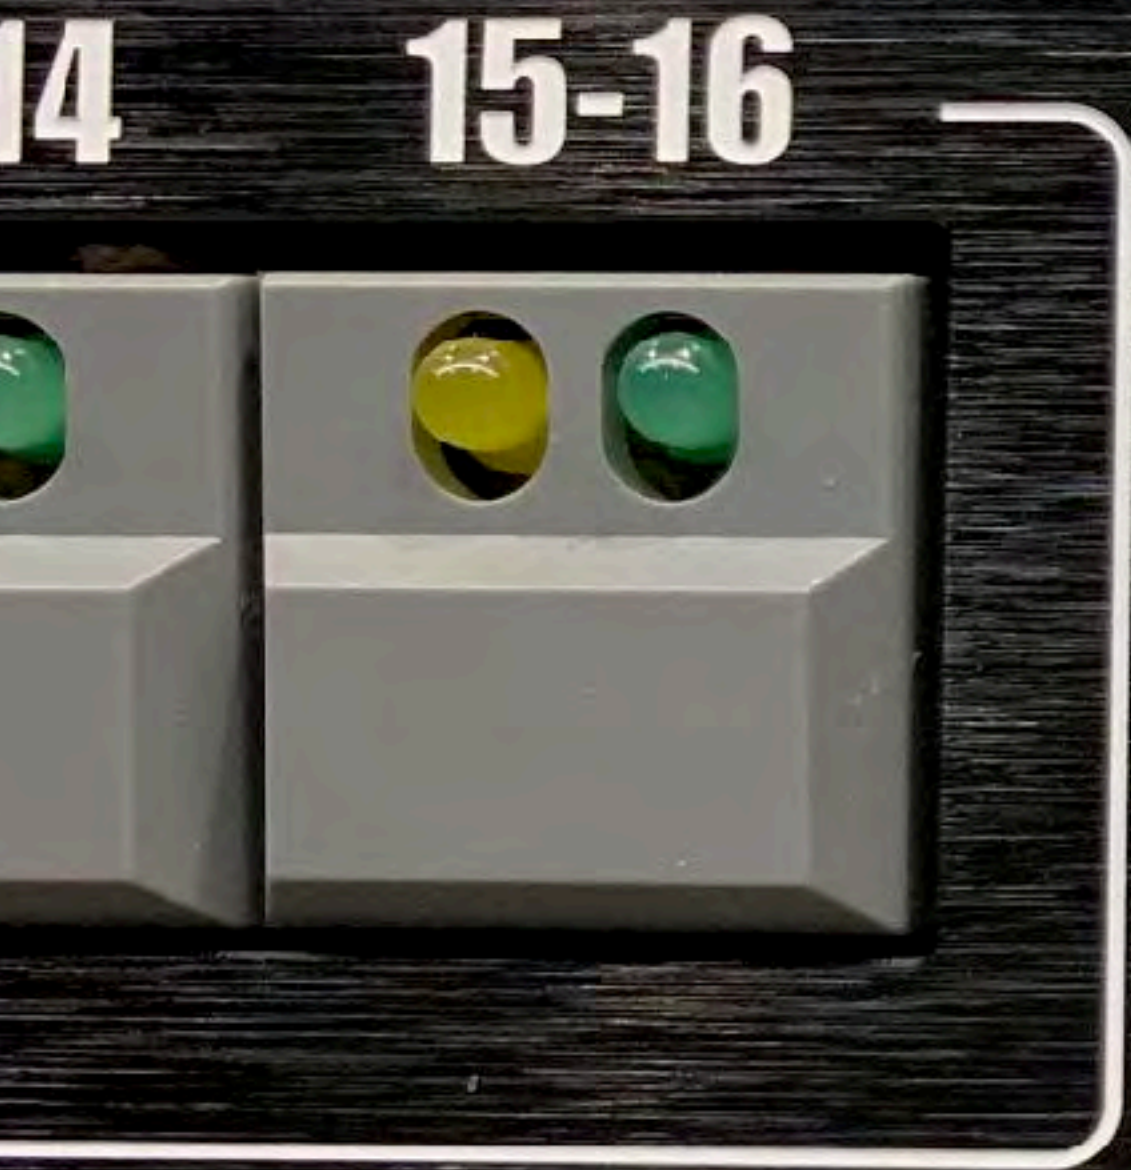

Affix the knob in place with the 1/16th hex tool

Tighten both hex screws

Replace the 8 screws from the lid

Good work!
